

Cricket(s)

Long considered one of the more boring competitive sports ever invented, the game of cricket got a welcome infusion of excitement one spring day in 2014 when Dr. Dagmar Dinklaker released a pair of giant carnivorous cricket-bots onto the playing field. No longer did spectators have to scratch their heads over the meanings of incomprehensible terms like dippers and donkey drops, mullygrubbers and nurdles. On that bright spring day, their focus was reduced to running for their lives. Many fans vowed to have a better understanding of the rules of the game next time but, of course, it was by then too late for that.
