

The DIY RPG

Since ancient times, indigenous people from the Amazon Rain Forest and Southeast Asia have used the blowgun as a weapon. But it took Hattie Flinderbok of Lansing, Labrador to turn it into a weapon of mass destruction. The blowgun's propulsive power had always been limited by the user's respiratory muscles, so Hattie quadrupled the length of the tube and added a miniature yet powerful bellows, which extended the range to a mile or more. Then, by affixing a high explosive warhead to the projectile dart, she had a do it yourself rocket-propelled grenade. Well done, Hattie!
