

N.I.M.B.Y.

Emil Dinklaker's initial proposal for a wind farm comprised five turbines on 30 acres of land adjacent an abandoned railroad spur on the edge of town. The land had long lain fallow, so Emil figured he was putting it to good use. He had not, however, figured on the small but vocal group of NIMBY – or Not In My Back Yard – opponents. As a result, he scaled back his project. Not once or twice but *eight* times, until the design that ultimately won approval from the grumpy protestors didn't even rely solely on wind as its energy source!
